## Amalgam and Resin Variable

Label	Service Codes	Multiplier	Treatment Variable Definition
Tx Grp. Surface Amalgam or Resin - 1 surface	D2140	1	The new variable "counts" the number of surfaces treated (or fillings) received by each child. For each of the services listed, we need the total counts of each service (see service codes for full list) received by each child. The new variable is the count of each service adjusted by the multiplier. New variable=(# D2140 codes)+(# D2330 codes)+2*(# D2150 codes)+(# D2331 codes))+3*(# D2160 codes)+(# D2332 codes))+4*(# D2161 codes)+(# D2335 codes))
	D2330	1	
Tx GrpSurface Amalgam or Resin - 2 surfaces	D2150	2	
	D2331	2	
Tx Grp.: Surface Amalgam or Resin - 3 surfaces	D2160	3	For simplicity, we will ignore whether or not services are received on the same date, and to eliminate outliers, we will create a top coded version of this variable. The top coded variable will replace all values greater than 10 with 10.
	D2332	3	
Tx Grp.: Surface Amalgam or Resin - 4 surfaces	D2161	4	
	D2335	4	

NOTOP value will be the value prior to top coding of values over 10 to 10.
