

Q-METRIC Sickle Cell Disease Measure 3: Appropriate Antibiotic Prophylaxis for Children with Sickle Cell Disease

Technical specifications for [Section II. Detailed Measure Specifications](#)

Sickle Cell Disease

Measure 3: Appropriate Antibiotic Prophylaxis for Children with Sickle Cell Disease

Description

The percentage of children younger than five years of age who were identified as having Sickle Cell Anemia who received appropriate antibiotic prophylaxis during the measurement year. A higher proportion indicates better performance as reflected by appropriate treatment.

Calculation

This measure requires administrative claims data and is calculated as two rates. The two individual rates are:

1. The percentage of children who received antibiotic prophylaxis for at least 300 days (300-day numerator divided by denominator).
2. The percentage of children who received antibiotic prophylaxis for at least 350 days (350-day numerator divided by denominator).

Definitions

Intake period	January 1 of the measurement year through December 31 of the measurement year.
Antibiotic prophylaxis	Any type of Penicillin or any type of Erythromycin, two doses daily, for the full 300 (or 350) days (see Table 3-A).

Table 3-A: Penicillins and Erythromycins for antibiotic prophylaxis

Description	Prescription
Aminopenicillins	<ul style="list-style-type: none"> • Amoxicillin • Ampicillin
Beta-lactamase inhibitors	<ul style="list-style-type: none"> • Amoxicillin-clavulanate
Macrolides	<ul style="list-style-type: none"> • Azithromycin • Erythromycin ethylsuccinate • Erythromycin • Erythromycin stearate • Erythromycin estolate
Miscellaneous antibiotics	<ul style="list-style-type: none"> • Erythromycin-sulfisoxazole • Vancomycin
Natural penicillins	<ul style="list-style-type: none"> • Penicillin V potassium • Penicillin

Note: See Table 3-D for a comprehensive list of medications and NDC codes.

Eligible Population

Ages	Children ≥ 90 days on January 1 of the measurement year but younger than five years on December 31 of the measurement year.
Enrollment	Continuous enrollment during the measurement year.
Event/diagnosis	Identify members as having sickle cell disease who had appropriate sickle cell disease-related ICD-9 code on three or more separate healthcare encounters (see Table 3-B) during the measurement year.

Table 3-B: Codes to Identify Sickle Cell Disease

Condition Name	Hemoglobin Screening Result	ICD-9 Code(s)
Hb SS-disease (sickle cell anemia)	Hb F,S	282.6, 282.61, 282.62

Specification

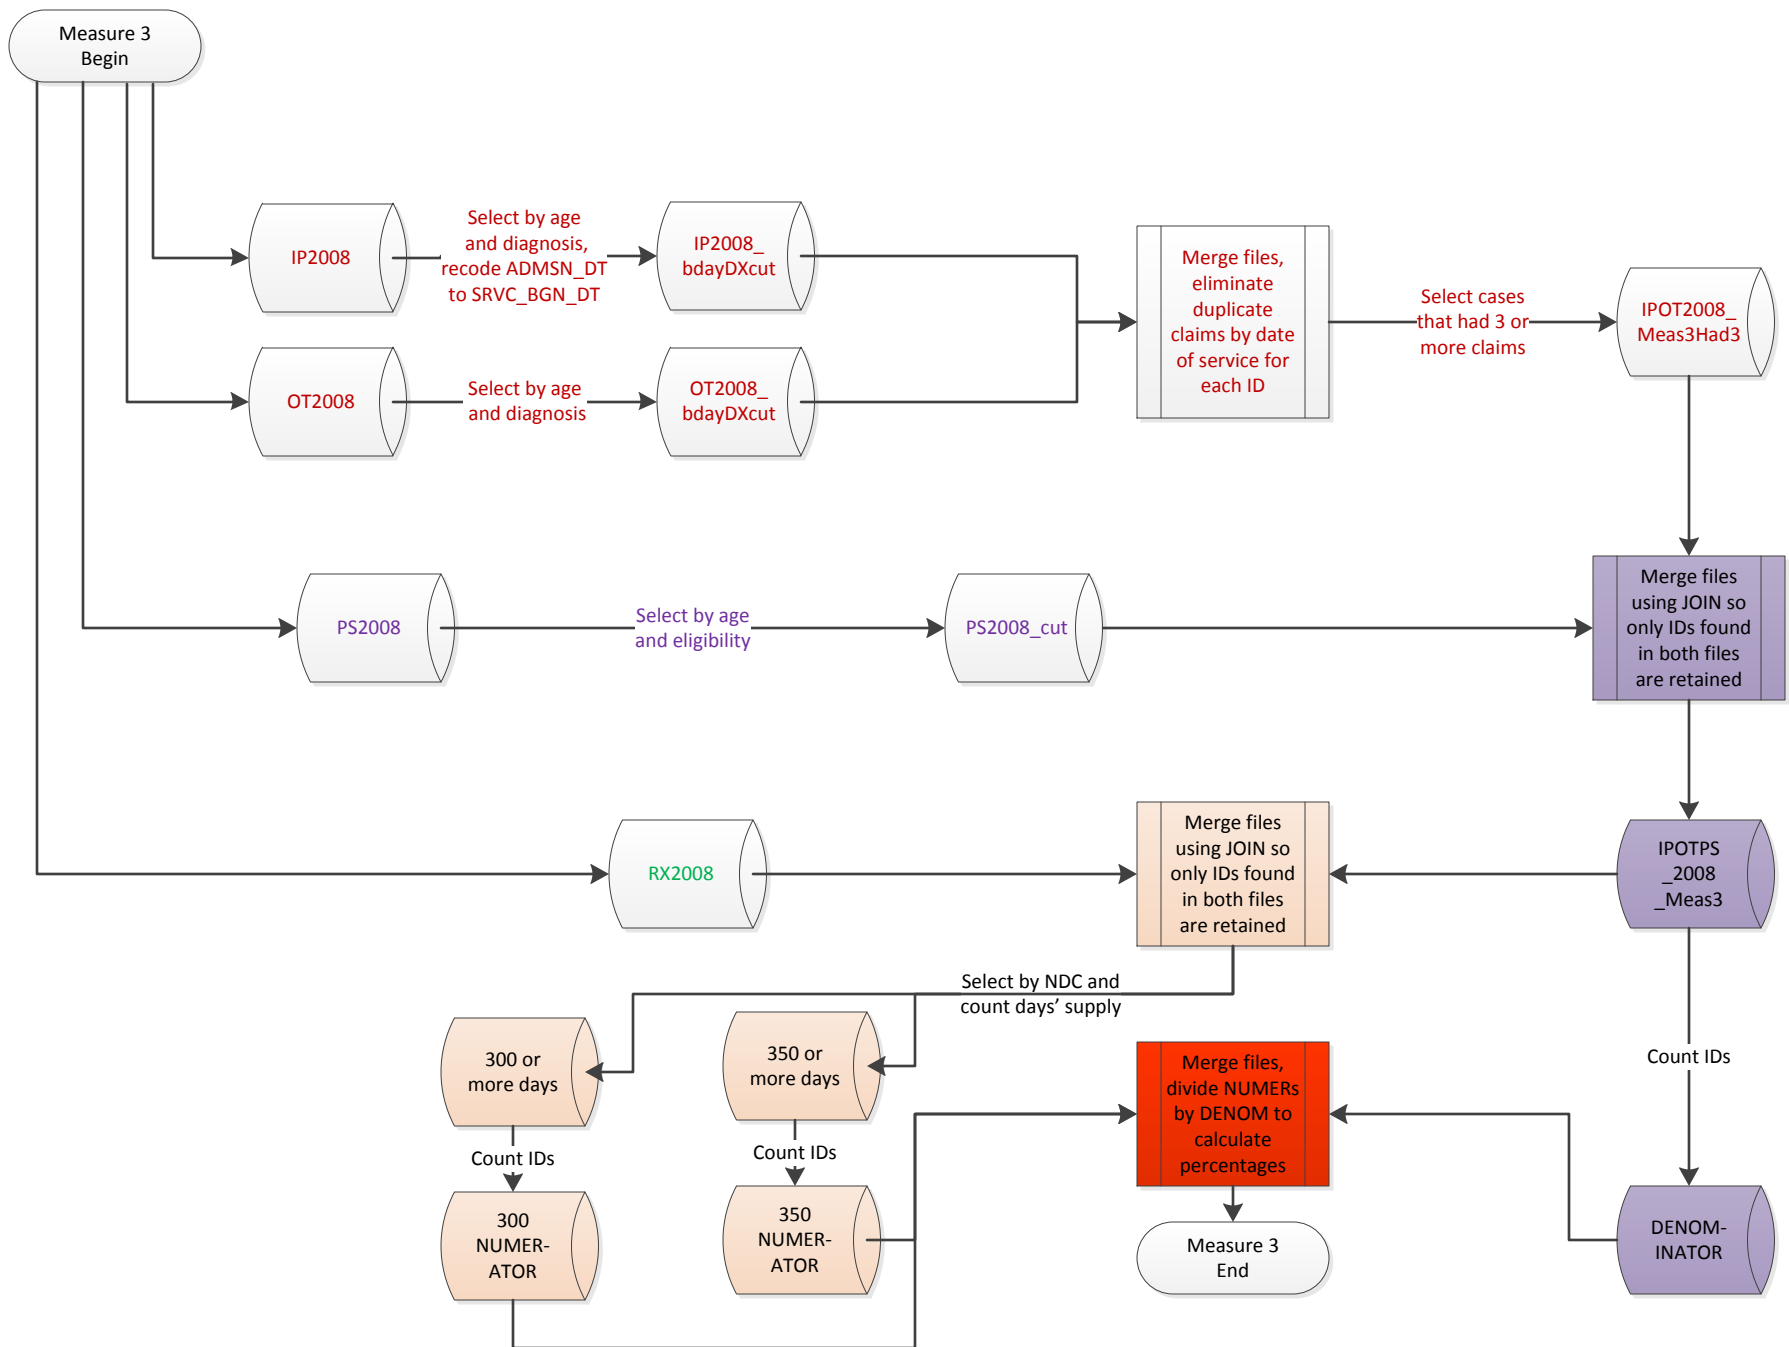

Denominator	The eligible population.
Numerators	
300-day	Eligible children who received antibiotic prophylaxis for at least 300 days as determined by administrative record review.
350-day	Eligible children who received antibiotic prophylaxis for at least 350 days as determined by administrative record review.

Exclusions

- Claims in the administrative records for any of the sickle cell disease variants listed in Table 3-C do not count toward the “three or more separate healthcare encounters” criteria.
