

## Without Principal Diagnosis

### Why your child was hospitalized

Your child's primary diagnosis was: Not on File  
Your child's diagnoses also included: Vomiting, Slow Transit Constipation

### Care Providers

Not on file

## With Principal Diagnosis

### Why your child was hospitalized

Your child's primary diagnosis was: Osteomyelitis of Left Wrist (Cms/Hcc)  
Your child's diagnoses also included: Left Wrist Pain

### Care Providers

Provider	Service	Role
Whitney Lee Browning, MD	Pediatrics General	Attending Provider

### Your Allergies

No active allergies

- Once you know Principal Diagnosis is important, how do you designate it?

The screenshot displays an EMR interface with a 'Problem List' section. At the top left, a tab labeled 'Problem List' is circled in red. Below it, a table lists medical problems. The table has columns for 'Hospital', 'Principal', 'Sort Priority', 'Resolved', and 'Updated'. The 'Principal' column header is circled in red. The table contains two rows of data:

Diagnosis	Hospital	Principal	Sort Priority	Resolved	Updated
Neck abscess		<input checked="" type="checkbox"/>	Unprioritized	<input checked="" type="checkbox"/>	-7 days [Redacted] MD
Left wrist pain		<input checked="" type="checkbox"/>	Unprioritized	<input checked="" type="checkbox"/>	Today [Redacted] MD
Osteomyelitis of left wrist (CMS/HCC)		<input checked="" type="checkbox"/>	Unprioritized	<input checked="" type="checkbox"/>	Today [Redacted] MD

Additional interface elements include a 'Care Coordination Note' link, a 'Search for new problem' field, and a 'View Drug-Disease Interactions' button. A 'Mark as Reviewed' button is also present at the bottom left of the table area.

- Using the team rounding tool to screen for Principal Diagnosis
- “Principal Hospital Problem” next to the diagnosis if correct
- If it’s not in parentheses, it’s not principal!

5 y.o. / M	Pneumonia of right middle lobe due to infectious organism (CMS/HCC) (Principal Hospital Problem)		
21	E. coli UTI (urinary tract infection) (Principal Hospital Problem)		
2 wk.o. / F	Fever (Principal Hospital Problem)		Contact
12 y.o. / F	Uterine bleeding, dysfunctional		
11 y.o. / M	Aggression (Additional Hospital Problems)
